Abstract

Document to learn latex basics. So far it looks good. https://www.overleaf.com/learn/latex/Learn_LaTeX

1 Introduction

Today's most of us start using computer for basic tasks. The tasks one are usually solved with Microsoft Word or similar software. This approach is called "What You See Is What You Get" (WYSIWYG). Once a person starts with programming, his perspectives changes. Using plain text files starts to be a daily routine and also many documents start to be in plain text. This naturally brings him to formats like markdown. Simple method of styling text with simple symbols. Such as # for Headline 1, ## for Headline 2 etc. Markdown works great, until the formatting becomes heavy. In that case it is time for something more powerful. To me latex seems just like it.

*inspired by the Overleaf team

2 First touches

Using lists is vivid for me in writing easy texts

- It helps me to simplify the message.
- Also the reader can easily remember it.

2.1 beyond the markdown

Actually i start learning it msotly because of the abiity to use math \sum_i^n

So what is missing?

Nothing?
